

Poster Planning Document

Group Number: 23. *Luke Sun, Winston Huang, Kiara Wei*

May 21, 2026

Part 1: Poster Overview

1. How many sections does your poster have?
Probably 10.

2. List all the sections in your poster:

- Title**
- Abstract**
- Related Studies & Research Gap**
- Methodology**
- Experiment Result**
- Discussion**
- Limitations**
- Conclusion & Future Works**
- Acknowledgements**
- References**

(You may add more if needed)

Part 2: Section Analysis Table

Complete the table below for each section of your poster.

Section Name	Purpose / Why is it important?	What content should be included?	Where will you get the information from?
1. Title	give audience a idea what our research is basically about.	The title of our study (about football and salary)	N/A
2. Abstract	a short paragraph introducing most important features of the research, concise.	Purpose, Significance, Methodology, Result Conclusion, Solutions, but brief.	It is basically about concluding the xontent of your research, nothing new.
3. Related Studies & Gap	Clarifying and finding the research gap, so that we could avoid repetitive research.	Existing studies, useful methodologies in these studies, logical relations between cited works.	Google Scholar, SciHub (lol), Consensus, etc.
4. Methodology	Telling methods that we use in our research, which is critical (so that they can eval.).	How we research, size of sample, what model we use for analysis, why we do so.	This is like the experimental design, nothing needed to be collected, just explain.
5. Experiment Result	Demonstrating results we obtain from research (data, interv. quotation, etc.)	Survey data, sample size, analyzed qualitative data, like quotations / transcription	data we collect in experiments, surveys, and analysis.
6. Discussion	interpreting results, make audience understand possible mechanisms beyond superficial.	interpretation of this result, and possible mechanisms behind them.	it should be manually interpreted, not collected from internet.
7. Limitations	making audience know that there may be something we are not confident with, and potential limitations of our mathodology	aspects that are not fully considered, sampling biases, methodological oversimplification, etc.	What’s the point of asking this? obviously not from internet. By ourself.
8. Conclusion & future works	plan the future work of this project, and maybe others would like to participate :)	giving some potential improvements about our limitations, and how will we improve in the future.	concluding what have we done, and give some future path.
9. Acknowledgements	showing respect and giving credits	thank teachers, and maybe peers who reviews our project	lol this column is useless
10. References	showing works we refered or cited.	reference, besically	google scholar bibtex.
